GUARDS + AI · ONE-PAGER

PHYSICAL GUARDS vs. AI SURVEILLANCE

THERE IS NO SECURITY WITHOUT ONE AND THE OTHER.

AI cameras are the best watchers ever built — and completely incapable of stopping anything. Summit Force builds the layer that closes the gap: licensed, uniformed officers who respond to what the machine sees, across Sacramento and 52+ Northern California cities.

AI SURVEILLANCE

DETECTION LAYER

▶ NEVER BLINKS

Analytics watch every feed 24 hours a day — no fatigue, no shift change, no blind spot.

▶ DETECTS IN SECONDS

Line-crossing, loitering, tent setup, and vehicle dwell classified faster than any monitor scan.

▶ REMEMBERS EVERYTHING

Searchable footage and pattern data give a property a factual record of what keeps happening.

LICENSED OFFICERS

RESPONSE LAYER

▶ ACTUALLY INTERVENES

A camera can't walk a subject off the property, lock a gate, or escort staff to their car.

▶ JUDGMENT & DE-ESCALATION

Officers read intent and context. Most calls end in a conversation, not a confrontation.

▶ COURT-READY DOCUMENTATION

DARs, incident narratives, and officer testimony turn a grainy clip into usable evidence.

DETECT · VERIFY · RESPOND · REPORT

01

DETECT

AI flags the event and pushes it to the monitoring feed instantly.

02

VERIFY

A human confirms real threat vs. false positive — the step cameras skip.

03

RESPOND

A BSIS-registered officer arrives, makes contact, resolves it on site.

04

REPORT

Clip, officer narrative, and outcome logged together so patterns get fixed.

FOUR WAYS CAMERA-ONLY SECURITY FAILS

- ✗ Cameras recorded the theft in 4K. Nobody was on site to stop it — footage went to an unsolved report.
- ✗ Motion alerts fired 60 times a night. Staff muted the app in a week; the real break-in was alert #61.
- ✗ A remote voice-down cleared the lot for eleven minutes. The crew came back and finished the job.
- ✗ The system tagged "person detected" but couldn't tell a delivery driver from a copper-stripping crew.

BUILD THE RESPONSE LAYER AROUND YOUR CAMERAS.

We integrate with your existing cameras, cloud video, and access control — no rip-and-replace.
